$M - U$ is the compliance gap under a change in perceived oversight, $U - B$ the residual effect of the directive when the model believes it is unmonitored. † marks values surviving Benjamini–Hochberg correction; unmarked cells are unresolved at this sample size and should not be acted on.

COMPLIANCE: GAP AND B/M/U TRIPLE

Mean compliance gap ($M - U$) per value

Bare / unmonitored / monitored compliance rate

REASONING COMPOSITION UNDER THE SIX-CATEGORY TAXONOMY

REASONING-CHOICE DIVERGENCE

Rate at which the stated reasoning and the final choice disagree, monitored (left) and unmonitored (right). Where divergence is elevated, the trace should not be read as a record of the decision.

All panels are populated directly from the judge pass; no generation stage sits between evaluation and card. A card describes one model on one benchmark version: it does not transfer across models, and says nothing about values outside those sampled. It goes stale silently if the serving checkpoint changes behind an unchanged model name.
